Inkscape

- ▶ It is a software whose source code is published and made available to the public, enabling anyone to copy, modify and redistribute the source code without paying royalties or fees.
- ▶ It is very often developed in a public/collaborative manner through community cooperation
 - ▶ These communities are composed of individual programmers as well as very large companies
 - ▶ Many of the individuals programmers who start an open source project usually end up as large companies with open source programs

Notable Open Source Projects I

Application Software

- | | | |
|------------|---------------|----------------|
| ▶ 7-Zip | ▶ Firefox | ▶ |

Clone vs Non-clone Alternative

- ▶ Clone software always follows the original software, hence clone is
 - ▶ always lagging
 - ▶ usually inferior
- ▶ In conclusion, often you won't be satisfied

Examples

- ▶ MS-Word vs Libre-office-Writer vs Abi-Word vs Calligra-Words vs Lyx
- ▶ Matlab vs Scilab vs GNU-Octave vs SciPython-Matplotlib

Learning New Software Packages

Try/Explore/Read about capabilities of the new software package

Find good examples

Short course/training/tutorial/user-guide

Test your knowledge through a real project

Use a book/manual/reference

If you find expert who is willing to answer your questions;

- ▶ you are lucky
- ▶ don't waste the chance

Usually there are two categories of word processing software packages

- ▶ What You See Is What You Get (WYSIWYG)
- ▶ What You See Is What You Mean (WYSIWYM)

WYSIWYG	WYSIWYM
Microsoft Word AbiWord LibreOffice Writer Calligra Words	<u>L^AT_EX</u>

Roughly, you can compare L^AT_EX to Word as you
compare Matlab to Excel

L^AT_EX vs Microsoft Word

L^AT_EX is a document markup language.

- ▶ Simply you can think of it as similar to HTML¹
- ▶ In order to create a document in L^AT_EX, a **.tex** file must be created using some text editor
- ▶ The **.tex** file is then compiled to produce the document
- ▶ L^AT_EX can generate several document formats including “pdf”

Although being free is an advantage, but it is a drawback at the same time

- ▶ Slow download server
- ▶ No clean official documentation
- ▶ Several alternatives to do the same thing

However; L^AT_EX is very mature and widely used by professional/enterprise publishers

- ▶ Also it has a big user community
 - ▶ when you encounter a problem, google it. Most likely you will find others had encountered it and found a solution

- ▶ To write C/C++ code, any text editor can be used. But using a good IDE can greatly ease your job.
- ▶ L^AT_EX is similar. Any text editor is ok, but a dedicated L^AT_EX editor is strongly recommended.
- ▶ A dedicated L^AT_EX editor
 - ▶ can highlight and auto complete L^AT_EX keywords
 - ▶ has several L^AT_EX templates for several types of documents
 - ▶ facilitates compiling and debugging
 - ▶ ...

Some L^AT_EX Editors

Kile; works on Linux, but can also work on Windows
(my favorite)

Texmaker; cross-platform
and many others

Due to its WYSIWYM nature, I feel more concentrating while using **L^AT_EX** as compared to **Ms-Word**.

LyX is a front-end to \LaTeX

- ▶ You can think of the LyX- \LaTeX relationship as similar to the Visual Studio-C++ compiler relationship
- ▶ Unlike \LaTeX , LyX comes with tidy and very good manuals
- ▶ Also it has a big community, i.e.,
 - ▶ it is mature enough
 - ▶ when you encounter a problem, google it. Most likely you will find others had encountered it and found a solution

Help menu includes very good manuals. The manuals themselves are LyX documents. So they are essentially very good LyX examples.

lyx\examples folder contains wide variety of very good examples

Test drive LyX to recreate the attached final exam

Beamer is a L^AT_EX class for creating **professional** presentation slides

Beamer template is a built in template in LyX provides to enable easily building presentations in LyX

Beamer manual explain creating Beamer presentations in plain LaTeX and LyX as well

Check this;

<http://www.hartwork.org/beamer-theme-matrix/>

Beamer-Article class is also available. It renders the slides on standard sized paper (like A4 or letter), with frame titles used as paragraph titles, no special slide layout/colors and keeps the sectioning.

- ▶ Beamer article class is suitable for creating lecture handouts (article)
 - ▶ You can have a single source file for the slides and its handouts
 - ▶ You can still control the source file so that the **slides** and the **article** are different.
-
- ▶ You can also use the Beamer-Article class within LyX

Keep your concentration

- ▶ Adobe Illustrator (*de facto* standard; bloated)
- ▶ Corel Draw (bloated)
- ▶ Inkscape (light, free,

cross-platform and
popular; my favorite)

- ▶ LibreOffice Draw
- ▶ ...

- ▶ Free
- ▶ Open source
- ▶ Cross platform
- ▶ Has a big community, i.e.,
 - ▶ it is mature enough
 - ▶ when you encounter a problem, google it. Most likely you will find others had encountered it and found a solution
- ▶ Much much powerful than MS-Word or MS-Power point sketching capabilities
- ▶ Has several plugins that greatly expand its capabilities

- ▶ Inkscape is based on bezier curves
 - ▶ Defines a curve using four information, start, end, start tangent and end tangent
- ▶ Additionally, you can draw and edit:

<ul style="list-style-type: none">▶ straight lines▶ circles/arcs/ellipses▶ text		<ul style="list-style-type: none">▶ \LaTeX formulas▶ function curves▶ ...
---	--	---

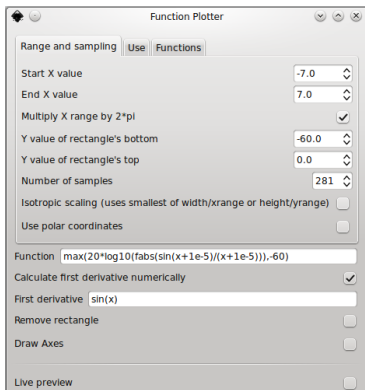

Import Graphics from pdf

- You can import vector graphics from pdf files, and even edit them

Function Plotter

- ▶ It is a built in plugins
- ▶ It uses brazier curves, same as Inkscape
- ▶ It calculates the function derivative and use it to adjust the curve slope
 - ▶ It produces very smooth curves using much less points than Matlab
 - ▶ You can still adjust/correct the curve manually

It allows you to write/edit \LaTeX formulas inside Inkscape

- ▶ **Explore** menus and toolbars
- ▶ **Official manual** [Tavmjong Bah, Inkscape: Guide to a Vector Drawing Program, Pearson Education, 4th ed, 2011] is very good and detailed
 - ▶ Chapters 1 includes 10 examples
 - ▶ The first 3 examples are enough for a good start
 - ▶ Chapters 5 explains editing
 - ▶ Surf it fast
- ▶ **Help menu** includes tutorials, FAQ, ...
